

Ask Don  
Your Audio Video Guide

**Don,**  
**What's the difference between Plasma and LCD? And which one is best for me?** Hilary - Margate, NJ

**Dear Hilary,**

**Plasma screens have always had a better picture than LCDs but It really depends on how much light is in the room and how wide your viewing angle will be. If the room has a lot of light when you'll be watching TV then I would recommend the LCD. If you need a wider viewing angle and the room will be dark when your watching then I recommend the Plasma. The Plasma screen handles motion better than LCDs, great for sports. The sooner you make the decision the sooner you'll be enjoying High Definition TV.**
